ACADEMIC PROJECT DEMO

CivicAI

Mobile Application

User Flow & Screen Guide

A screen-by-screen walkthrough for citizens and government officers, based on the CivicAI Spring Boot + Angular academic prototype.

ILLUSTRATIVE MOBILE MOCKUPS | OCTOBER 2026

01 / OVERVIEW

One report. A traceable case.

Follow the sequence from citizen observation through officer verification and closure.

1 OPEN

Citizen visits the CivicAI site on a mobile browser.

2 REPORT

Description, coordinates, and optional image are submitted.

3 TRIAGE

Text keyword rules suggest category, department, and priority.

4 CONFIRM

A case reference and private tracking URL are returned.

5 REVIEW

Officer authenticates, checks evidence, and updates the case.

6 RESOLVE

Citizen sees progress and resolution notes on tracking page.

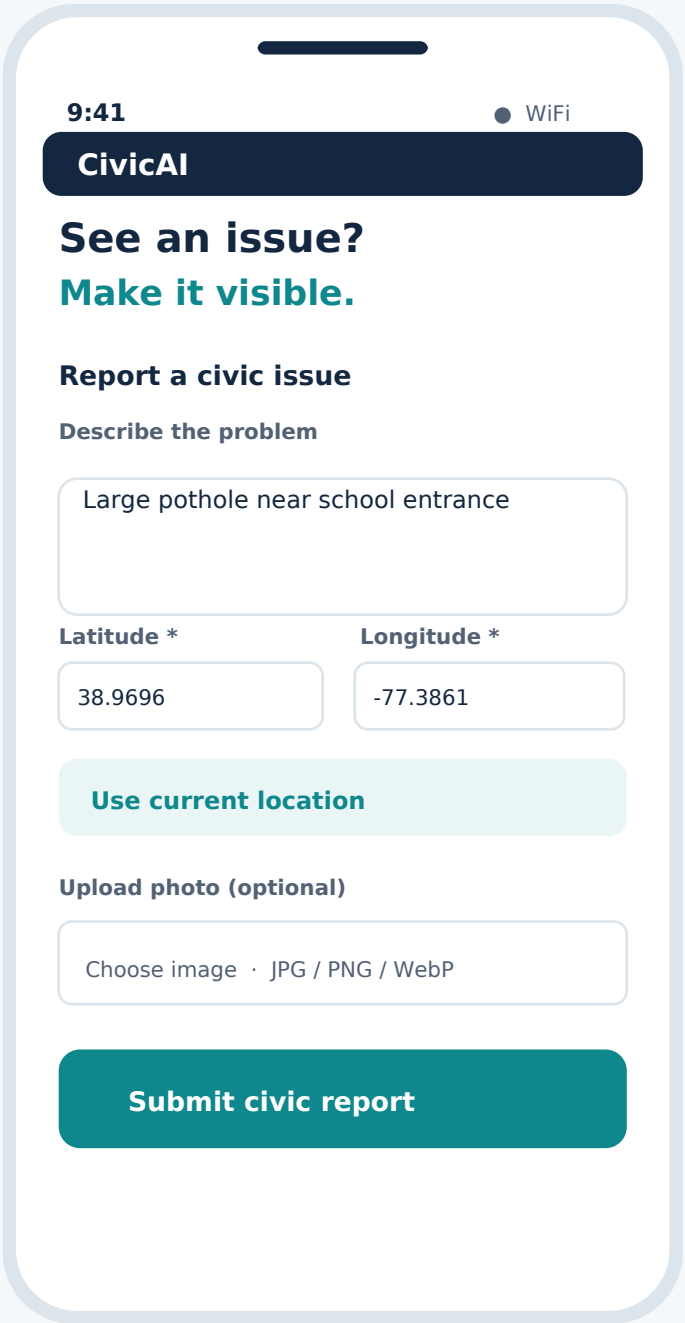

The governance rule

Suggestions are NOT verified AI findings. The current app uses text-only demo triage; officers remain responsible for decisions.

02 / CITIZEN SCREEN

Submit a civic issue

The citizen uses a phone browser to enter a description, location, and optionally attach a photo.

WHAT THE USER DOES

- **Open the site**
  Tap Report an Issue from the navigation.
- **Describe the issue**
  Minimum 8 characters; use clear facts.
- **Provide location**
  Enter coordinates or allow browser GPS.
- **Attach a photo**
  Optional, JPEG/PNG/WebP below 5 MB.
- **Submit**
  A case is stored and tracking information returned.

DEMO TIP

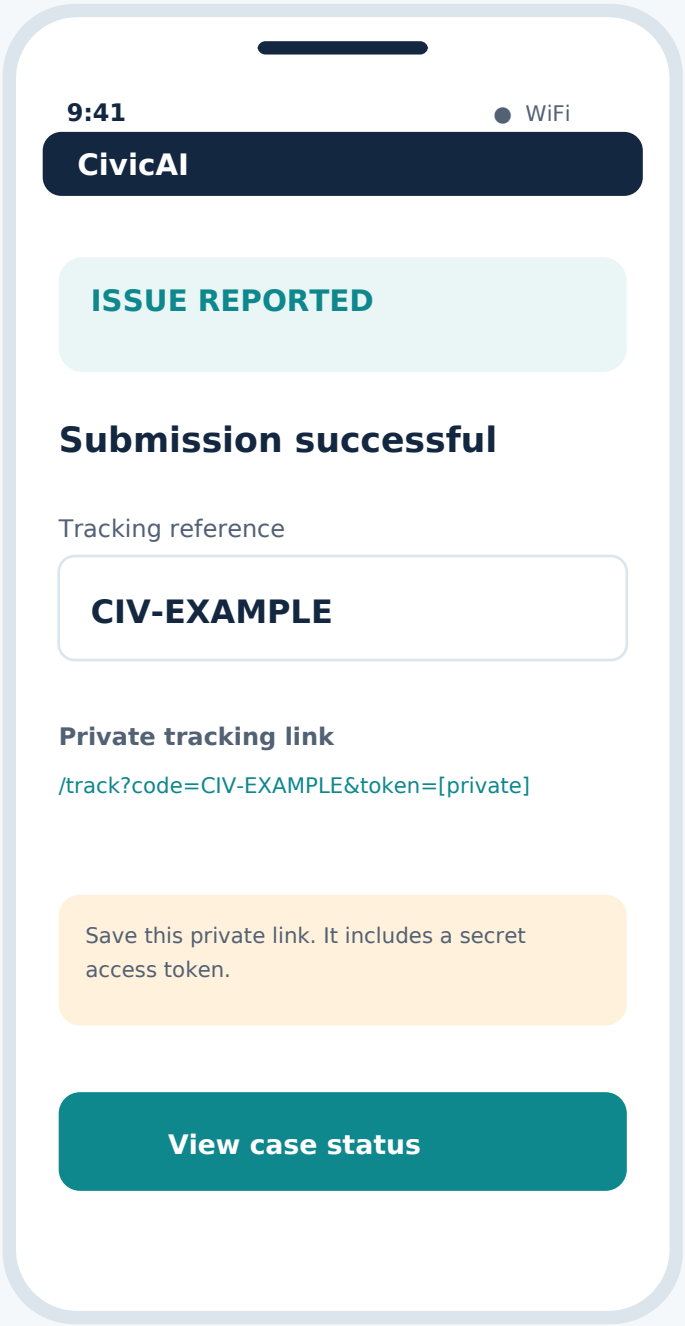

Use a demonstration pothole description. Explain that GPS typically requires HTTPS and user permission.

Screen shown is an illustrative mockup of the supplied Angular code; spacing and appearance may differ from a running build.

03 / CONFIRMATION

Case number and private link

Successful submission immediately returns a tracking reference and a secret access token.

WHAT THE USER DOES

- **Receive reference**
  A unique case code identifies the report.
- **Save the link**
  The tracking URL contains a private token.
- **Open tracking**
  Tap View case status or use the Track Case screen.
- **Keep it private**
  Do not post the private tracking URL publicly.

DEMO TIP

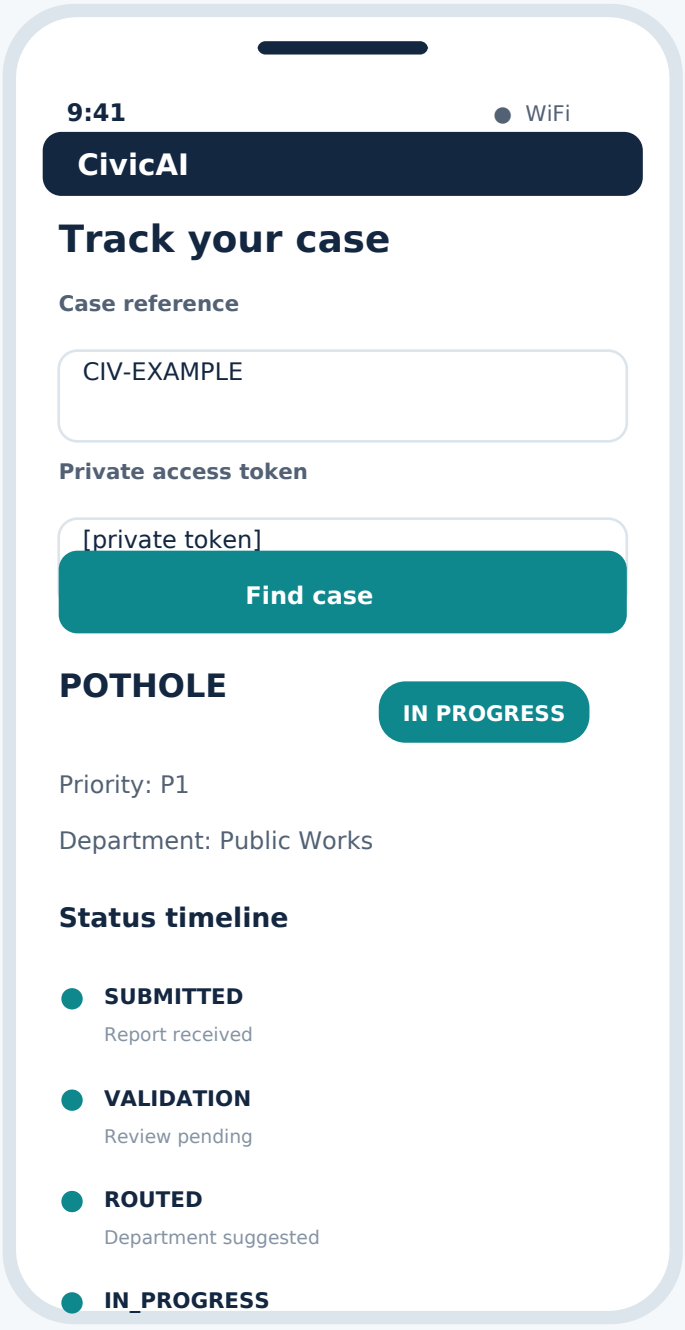

CIV-EXAMPLE is placeholder data. The actual reference and token are generated by the backend.

Screen shown is an illustrative mockup of the supplied Angular code; spacing and appearance may differ from a running build.

04 / CITIZEN TRACKING

Check case progress

Users access their record using both the reference number and the private token.

WHAT THE USER DOES

- **Enter credentials**
  Provide case code and private access token.
- **See the assessment**
  Category, priority, department and rule-based observation.
- **Read status history**
  See timestamps, actors, and reasons for updates.
- **Check the resolution**
  Read the officer resolution note when recorded.

DEMO TIP

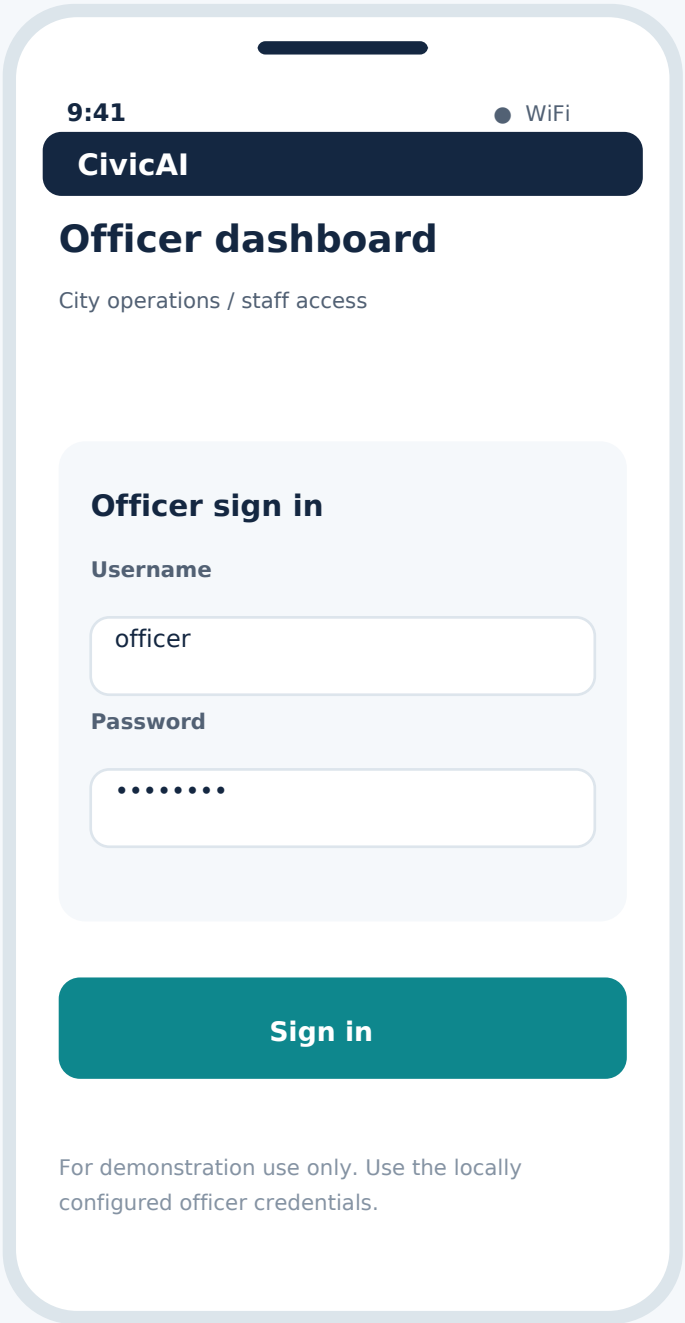

The displayed steps are an illustrative case history, not a fixed status sequence automatically assigned to every case.

Screen shown is an illustrative mockup of the supplied Angular code; spacing and appearance may differ from a running build.

05 / STAFF ACCESS

Officer sign-in

A designated officer accesses the management portal after authentication.

WHAT THE USER DOES

- **Open Officer Portal**
  Select the Officer Portal navigation link.
- **Sign in**
  Use ADMIN_USER and ADMIN_PASSWORD configured locally.
- **Verify access**
  Successful sign-in loads the case queue.
- **Stay secure**
  Do not expose officer credentials in slides or GitHub.

DEMO TIP

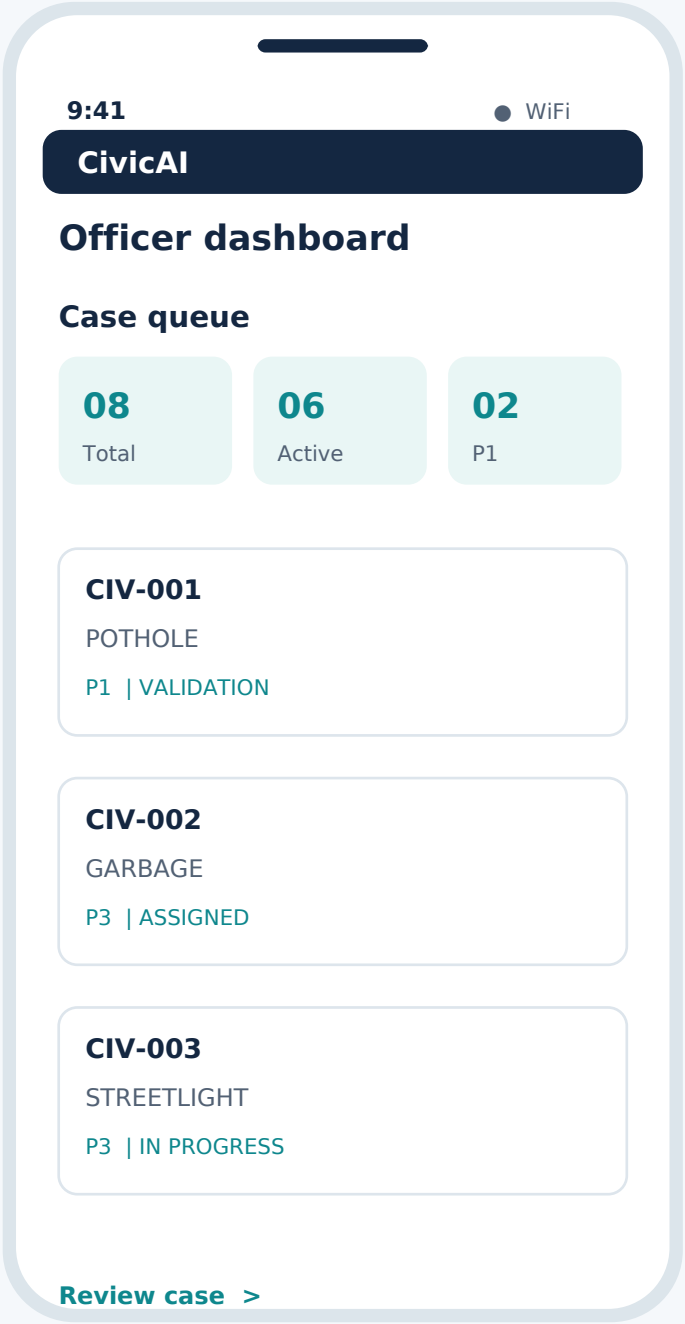

The academic backend uses demo HTTP Basic authentication. Do not treat this as production-ready civic-system security.

Screen shown is an illustrative mockup of the supplied Angular code; spacing and appearance may differ from a running build.

06 / OFFICER QUEUE

Review the case queue

After sign-in, officers see total cases, active cases, P1 counts, and a table of reported issues.

WHAT THE USER DOES

- **View queue**
  See current cases and their categories.
- **Check priorities**
  P1 is the high-priority demo classification.
- **Select case**
  Choose Review to inspect a specific submission.
- **Handle on mobile**
  The actual table can scroll horizontally on narrow screens.

DEMO TIP

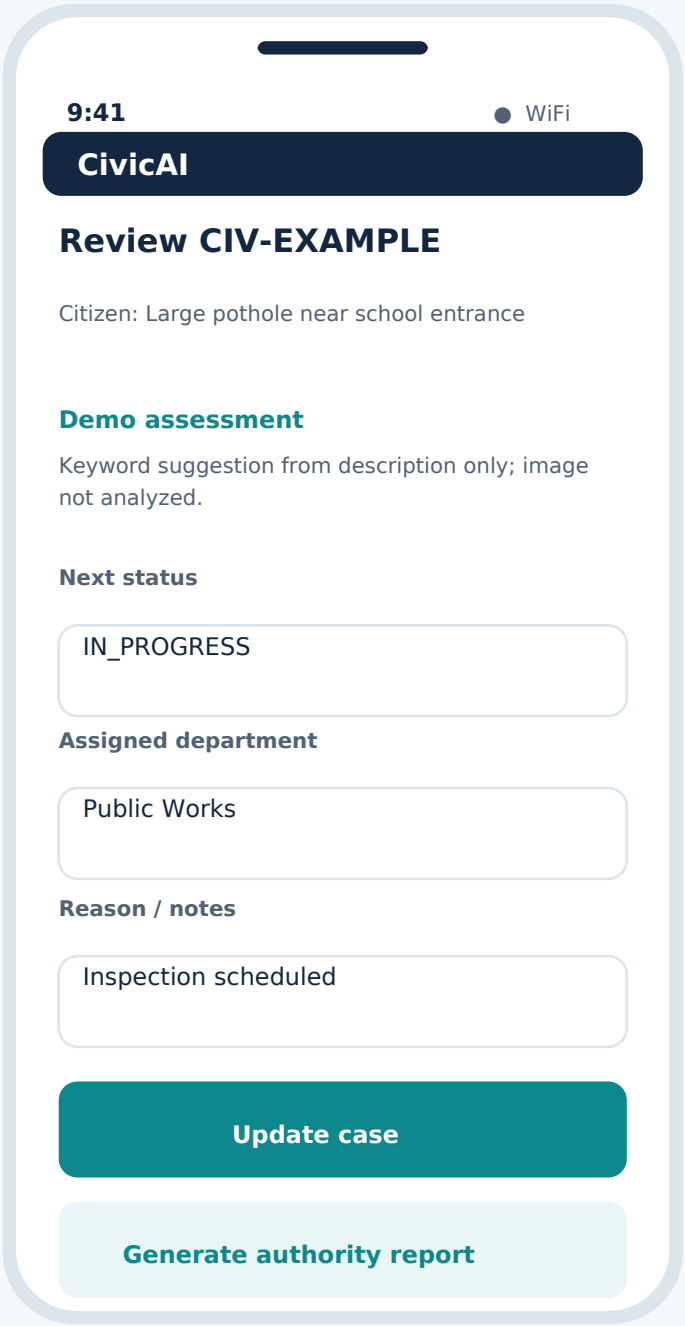

The mobile screen shows simplified case cards for readability. The current Angular implementation uses a horizontally scrollable table.

Screen shown is an illustrative mockup of the supplied Angular code; spacing and appearance may differ from a running build.

07 / OFFICER ACTION

Update and resolve

The officer reviews the reported evidence, chooses a permitted status, and records notes.

WHAT THE USER DOES

- **Inspect details**
  Read citizen description, location and rule-based suggestions.
- **Choose next status**
  Follow backend transition rules.
- **Record reason**
  Document the purpose of the update.
- **Resolve when ready**
  Enter a resolution note before RESOLVED.
- **Preview report**
  Generate a text-based authority report.

DEMO TIP

The current officer UI does not display an embedded uploaded-photo preview. Protected photo retrieval is an API feature.

Screen shown is an illustrative mockup of the supplied Angular code; spacing and appearance may differ from a running build.

08 / WALKTHROUGH

Demonstrate a complete case

A ready-made 8 to 10 minute academic presentation sequence.

00:00-01:00	**Introduce CivicAI** Explain citizen reporting, government triage and officer accountability.
01:00-02:30	**Open citizen home** Enter a pothole description, coordinates, and optional photo.
02:30-03:30	**Submit case** Show tracking reference and private URL; save them.
03:30-04:30	**Inspect case tracking** Open the link to see category, priority and status history.
04:30-06:00	**Officer authentication** Sign in and locate the new case in the queue.
06:00-08:00	**Review and update** Explain demo classification, set next status, add notes.
08:00-09:00	**Resolve case** Provide a resolution note, update through permitted transitions.
09:00-10:00	**Return to tracking** Refresh citizen page and show the latest history and result.

Present the system as a controlled academic prototype; emphasize that verification and operational decisions remain with people.

09 / NOTES

Run it and explain the boundaries

Use this page before a classroom demo or while testing from a mobile device.

CURRENT CODE SUPPORTS

- Responsive Angular citizen and officer views
- Text-only demo triage from report description
- Optional image upload with size/type limits
- Private-token case tracking and status history
- Officer update and authority text report

NOT YET IMPLEMENTED

- Actual AI photo understanding
- Interactive geographic map or PostGIS routing
- Automatic department email notifications
- Mobile push notifications or native app
- Production-grade identity and privacy controls

MOBILE ACCESS ON THE SAME WI-FI

1. Start Docker: docker compose up --build -d
2. Start Angular: cd frontend then npm start -- --host 0.0.0.0
3. Find the laptop IPv4 address: ipconfig
4. Open http://LAPTOP_IP:4200 from the phone browser.
5. Allow Windows Firewall access as needed.
6. GPS may require HTTPS; enter sample coordinates if unavailable.

Screens are based on local source files from the supplied CivicAI-Academic project. They are not live-device captures. Do not use fake personal data or publish private case tokens.
